1

Acording to the program you are using to create your prototype link :

Create a study on your dashboard and add your public Adobe XD prototype link.

Create a study on your dashboard and add your public Axure prototype link. (image of where to access public setting)
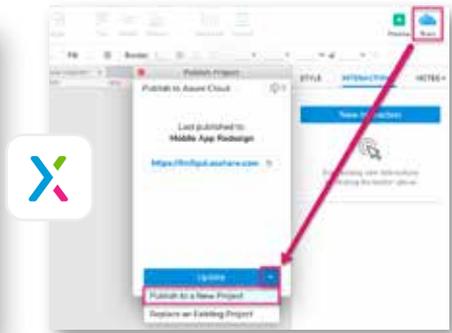

Create a study on your dashboard and add your Figma prototype link, there are a few sharing options you can explore here. (link to different types of sharing Figma options.)

Create a study on your dashboard and add your public Protopie prototype link. (image of where to access public setting)
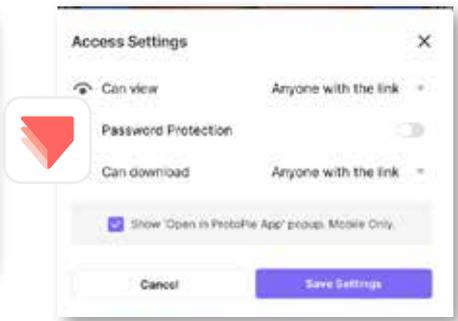

Create a study on your dashboard and add your public Sketch prototype link. (image of where to access public setting)

Create a study on your dashboard and add your public Framer prototype link. (image of where to access public setting)
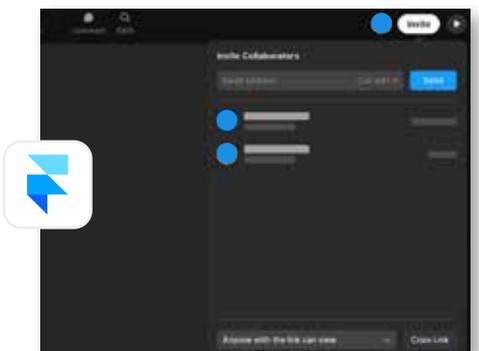

2

Set a list of tasks and scenarios to be carried out by the tester.

3

Launch the study to our panel of 1.5 million testers or you can invite your own participants!

4

Watch videos of people interacting with your prototype and use our features such as real-time annotations to make sure you make the most out of each result!

5

Launch the study to our panel of 1.5 million testers or you can invite your own participants!

Benefits of using prototypes

- Avoid costly mistakes — by testing your prototype early on in your design process you'll save time and money.

- Get unbiased feedback from people outside your company!

- Try various versions of your prototype and see which best fits your vision.
